
A Benefits of identity representation
$a_i = 0.5$
$a_i = 1$
$a_i = 2$
$a_i = 4$
Decision loss, $L_i$
Representational resource, $r_i$
B Optimal allocation
Total decision loss
Optimum
Resource to preconditioned identity, $r_P$
C Allocation follows utility
Allocation difference, $r_P^* - r_C^*$
More to $P$
More to $C$
Equal utility
Relative computational value, $a_P/a_C$
D Model prediction
Simulated participants
$\rho = -0.307$
Preconditioned-cue identity representation (a.u.)
Conditioned-cue identity representation (a.u.)
E Test in fMRI data
Lateral OFC
ρ = -0.317
p = 0.041
Preconditioned-cue identity representation (RSA ρ)
Conditioned-cue identity representation (RSA ρ)
Medial OFC
ρ = -0.030
p = 0.437
Conditioned-cue identity representation (RSA ρ)
